# **PRESS RELEASE**

*for immediate release*

## **Alloy Rally Ramps**

Optimum Balance Products have just released their new Alloy Rally Ramps which are specifically designed for low riding vehicles, race cars and cars with deep spoilers.

At approximately 1.1 metres long the ramps are longer than most ramps on the market. This extra length allows a shallow angle of approach and means that deep spoilers won't foul on the ramps. Once at the top of the ramp the wheels are chocked by a V shaped depression in the ramp. There will now be sufficient clearance under the spoiler to insert a trolley jack and raise the car higher if required.

Despite their length the ramps are surprisingly light and weigh less than most steel ramps. The all welded construction makes the ramps strong enough to support almost all vehicles that will physically fit on them and a cut out in the end plate allows easy handling when aligning the ramps.

OBP Alloy Rally Ramps retail at **£189.50 + VAT**

Trade enquiries welcome
